

9MMPANEL

FX TYPE: BreadBuddy

Enclosure Size: none

© 2019 [madbeanpedals](#)

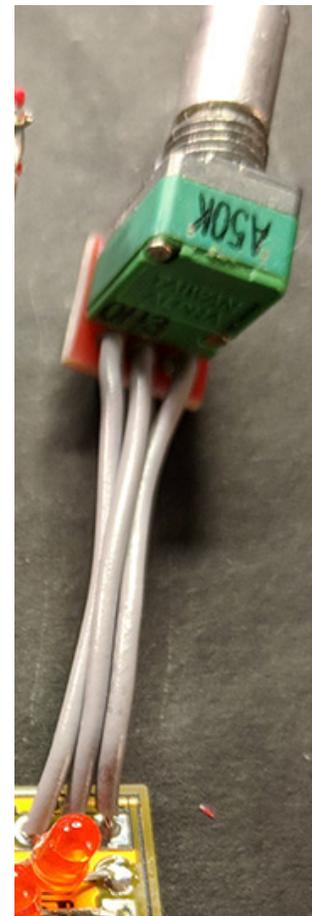

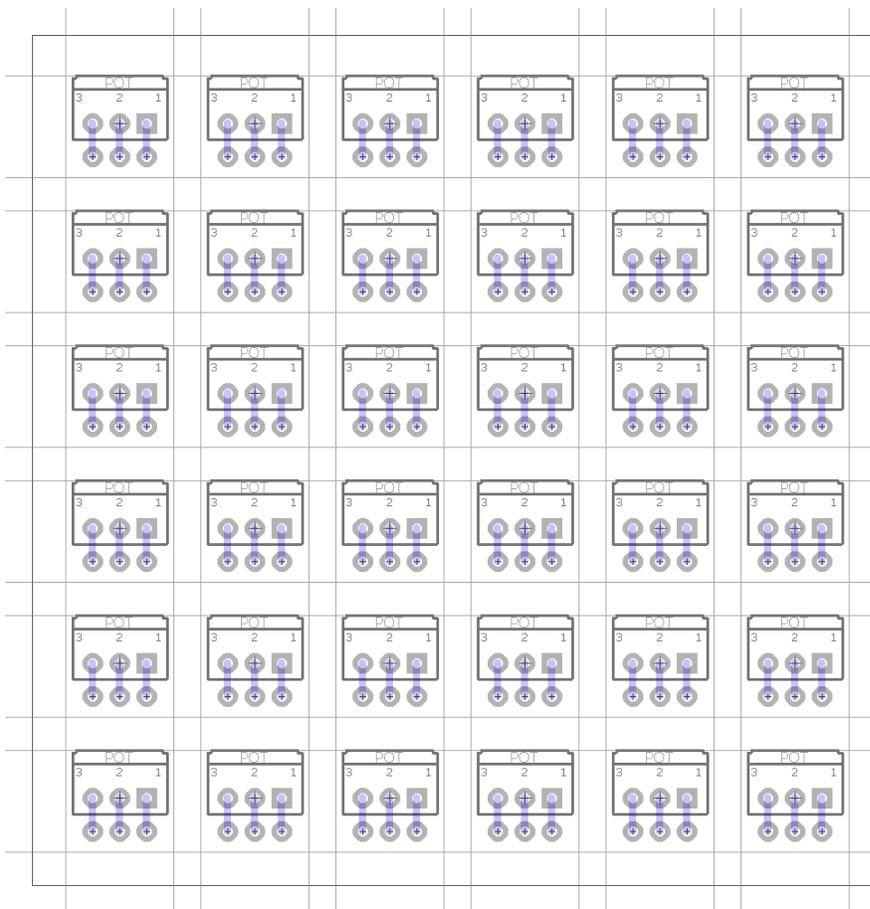

You breaks them apart (gently). You solders them to you 9mm pots. You solders wirezes to the PCBs. You solder wires to you other PCB.

You gets 36 of them. If you buys two, you get 69,....84....72 of them.

P.S. You can solders the 9mm pots to either side of the PCB.

P.S.S. You could maybe make a happy little resistor tree with them.

Terms of Use: You are free to use purchased **9mmPanel** circuit boards for both DIY and small commercial operations. You may not offer **9mmPanel** PCBs for resale or as part of a "kit" in a commercial fashion. Peer to peer re-sale is fine, though.

Technical assistance for your build(s) is available via the [madbeanpedals forum](#). Please go there rather than emailing me for assistance on builds. This is because (1) I'm not always available to respond via email in a timely and continuous manner, and (2) posting technical problems and solutions in the forum creates a record from which other members may benefit.
