R12	22k	C12	1n5		
R13	100R	C13	100uF		
R14	1k	C14	100n		
R15	10k	C15	10uF		
R16	10k	C16	10uF		
R17	10k	C17	10uF		
R18	4k7	C18	1uF		

Notes

Oscillation at high gain settings seems to be a frequent problem with this design. The added input buffer is reported to help with this. If you still get oscillation at the maximum gain setting, consider using a 50kA pot for the Gain instead (or put a 100k resistor across the existing 100kA pot). Also, this design runs at +/-12v instead of +/-15v.

Other mods: C11 increased to 220pF from the stock 22pF cap. Added the LP filter at the output to tame some treble.

For asymmetrical clipping, jumper either D2 or D4.
