

Kompromat24

F X Type: **COMPRESSION**

Build Level: Intermediate

Based On: Keeley® Compressor™ and Barber® Tone Press™

Last Updated: August 17, 2024 5:33 PM

© 2024 [madbeanpedals](#)

The 2024 version of the **Kompromat** has no circuit changes and minor layout tweaks.

Overview

The Kompromat takes elements from both the original Keeley® Compressor and Barber® Tone Press™ and combines them into a single hybrid project. These are, in turn, based on the classic Ross OTA compressor. Taking into account the current shortages and decreasing part availability, the Kompromat offers the option to use either the stock CA3080 or the more widely available LM13700 OTA depending on which you have at your disposal. You only need use one of these for the project.

Controls

- **SUS:** Sets the total compression level (and the threshold trigger and compression ratio).
- **ATTACK:** Sets the response time of the compression effect. CCW: fast attack, CW: slow attack.
- **BLEND:** CCW: dry only. CW: compression only. In between will mix the dry and compressed signals.
- **CLIP:** This control reduces the input to the compressor. Set CCW for single coils and turn up for hotter pickups like P-90's or humbuckers to reduce any clipping of the compression.
- **LVL:** Effect output level.
- **BIAS:** Sets the balance of the two OTA inputs. See Notes for adjustment.

Here is an excellent explanation of the Keeley® Compressor:

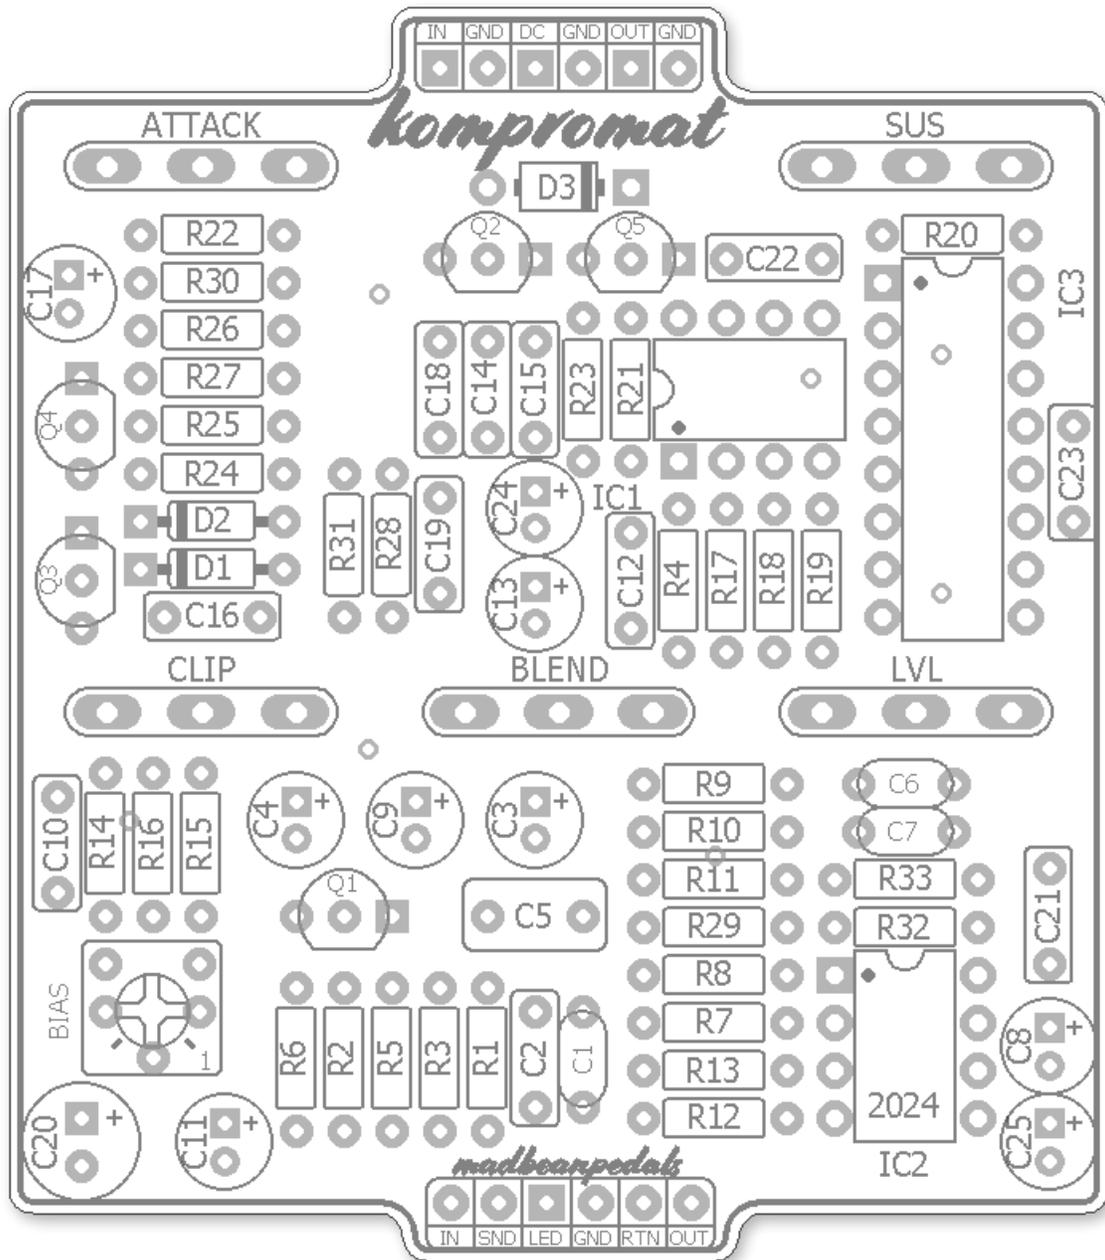

<https://robertkeeley.com/2013/07/manic-compressive/>

Terms of Use: You are free to use purchased **Kompromat24** circuit boards for both DIY and small commercial operations. You may not offer **Kompromat24** PCBs for resale or as part of a "kit" in a commercial fashion. Peer to peer re-sale is fine, though.

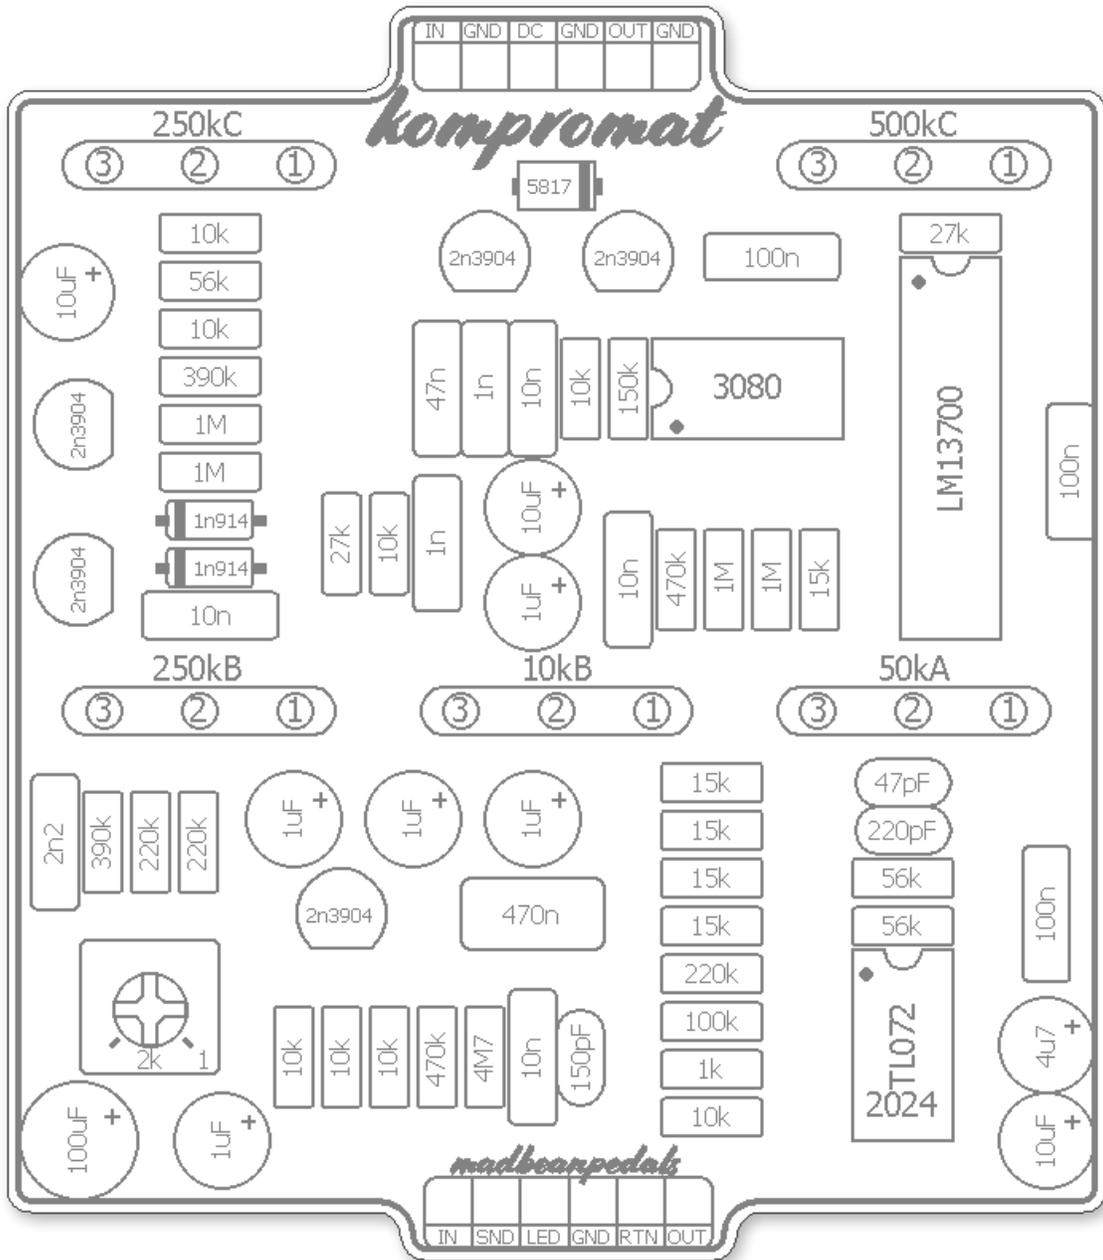

Technical assistance for is available via the [madbeanpedals forum](#). Please go there rather than emailing me for personal assistance. This is because (1) I'm not always available to respond via email in a timely and continuous manner, and (2) posting technical problems and solutions in the forum creates a record from which other members may benefit.

All copyrights and registered trademarks are property of their original owners. Any mention of trademarked or intellectual properties in this documents is purely for comparative purposes.

Component Values

Trace Layout

Wiring

The Kompromat24 is compatible with both the **SSBP** and **SSABP** bypass boards available at madbeanpedals. The wiring is the same for both.

Additional Hardware

- (1) 125B enclosure
- (2) 1/4" mono jacks
- (1) Slim 2.1mm DC jack
- (1) Standard 3PDT footswitch
- (1) 5mm LED

Build Notes

Remember: use only the CA3080 or the LM13700. Not both! I found them to be comparable in the Kompromat with perhaps a hair more compression at max settings with the LM13700. But, there is plenty of compression whichever chip you use so don't sweat it. You can easily swap them out to test yourself.

BIAS trimmer adjustment

Start with

- BLEND and SUS to max
- CLIP to min
- BIAS, ATTACK and LVL to midway

Play chords and/or notes and listen to the output. Make small adjustments to the BIAS trim (left or right) to get the cleanest output possible with no gating. Usually this will be in the middle of the BIAS trimmer anyway. If you are not using single coils for testing, adjust the CLIP control to ensure you get a good response with your BIAS trimmer setting. It may take some back and forth but should be straight-forward to set correctly with just listening.

Circuit Voltages

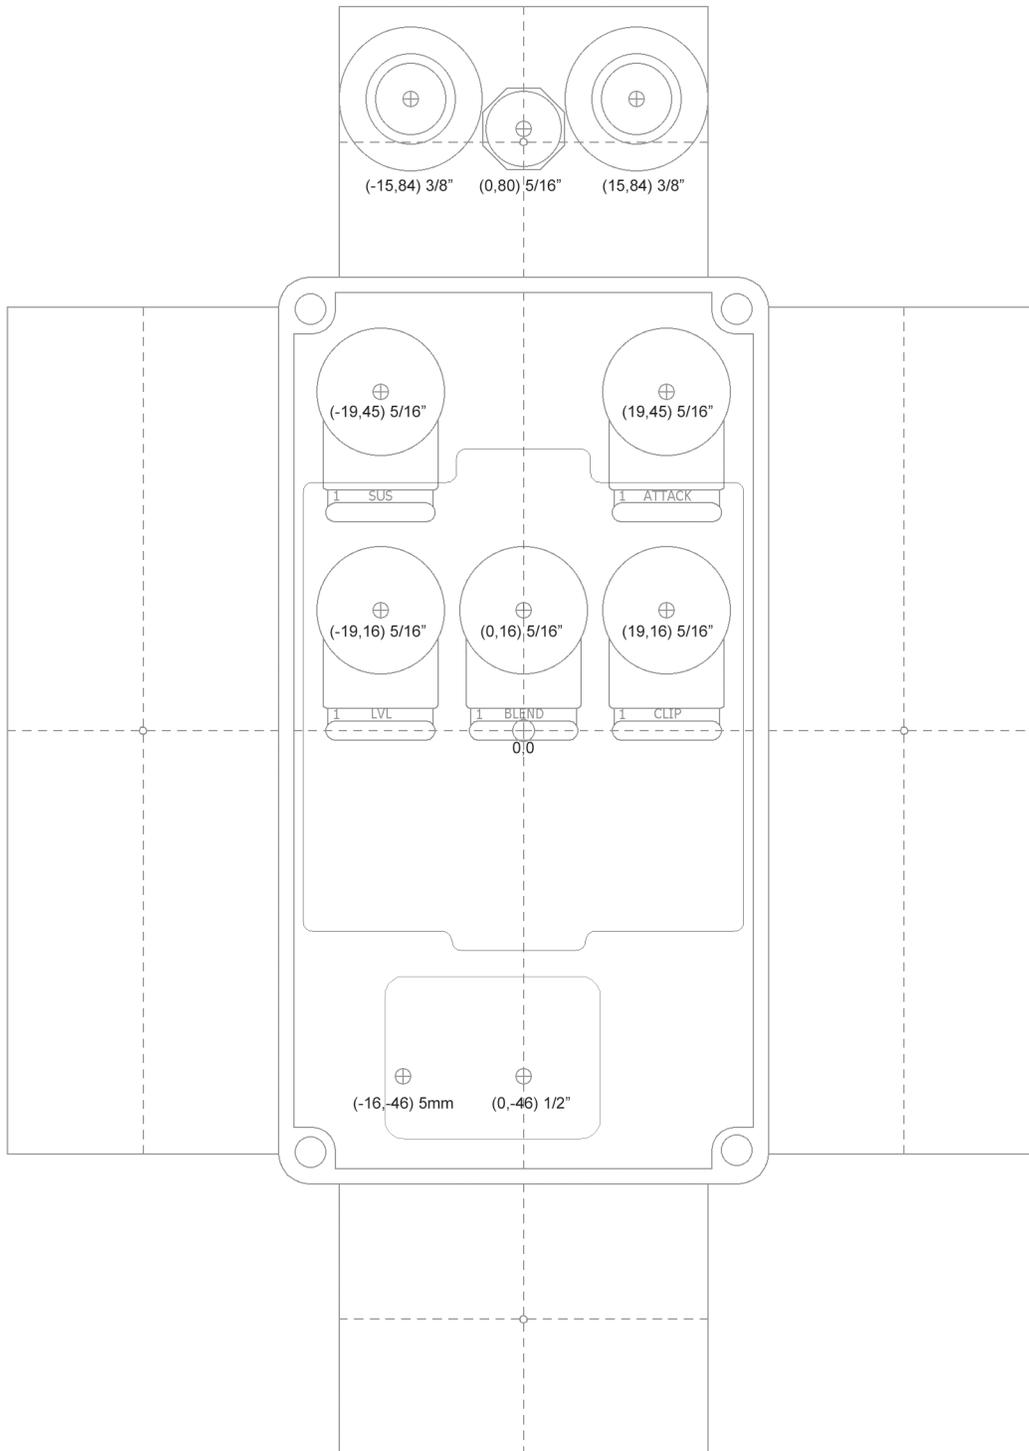

IC1 CA3080		IC3 LM13700		Q1 2n3904		Q4 2n3904	
1	ignore	1	1.2	C	7.64	C	8.9
2	4.55	2	2.11	B	2.06	B	~mV
3	4.55	3	4.6	E	1.54	E	0
4	0	4	4.6				
5	0.66	5	2.5	Q2 2n3904		Q5 2n3904

5	4.58	14	ignore				
6	4.58	15	ignore				
7	4.58	16	ignore				
8	9.18						

- 9.42vDC One Spot
- Current Draw: 5mA
- Readings were taken with all knobs about halfway up.
- Note the difference in readings on the bias input pins of the two OTA chips (pin6 of the CA3080 and pin 1 of the LM13700). This may account for any difference in compression levels between the two.

Drill Template

Coordinates are denoted in **(X,Y)**, **drill size** format starting from the center (0,0) location of the enclosure.

Tayda drill template: https://drill.taydakits.com/box-designs/new?public_key=eGwx080M0dHeFpIWUFWT0dtbmJvdz09Cg==

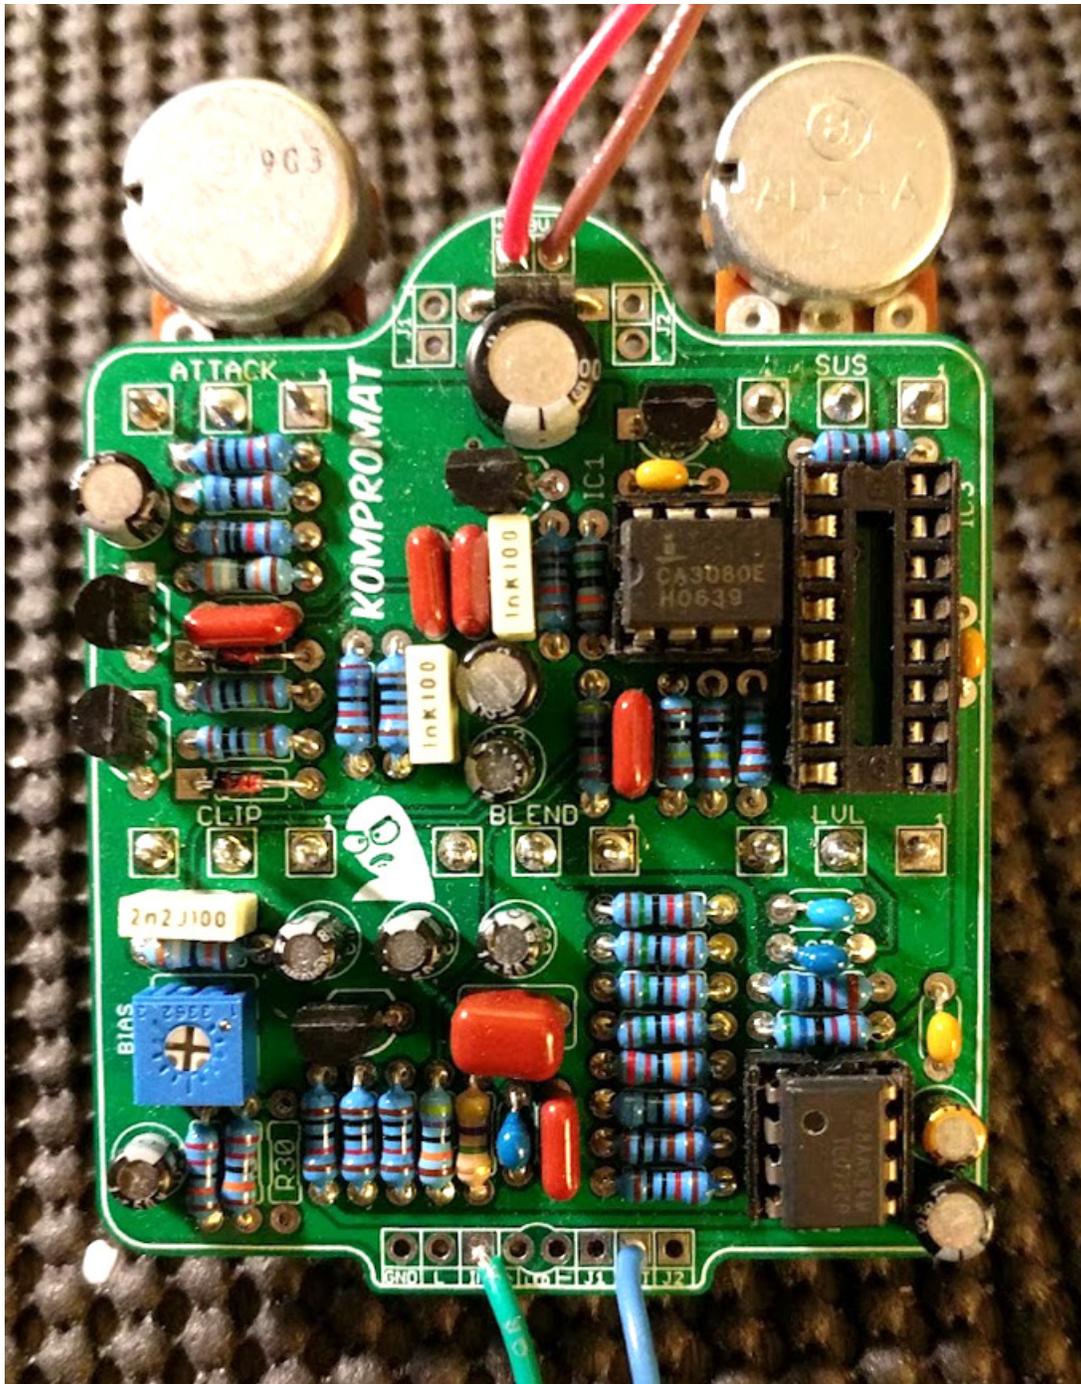

Hardware

125B enclosure
Mono jacks
Slim 2.1mm DC jack
Standard 3PDT footswitch
5mm LED

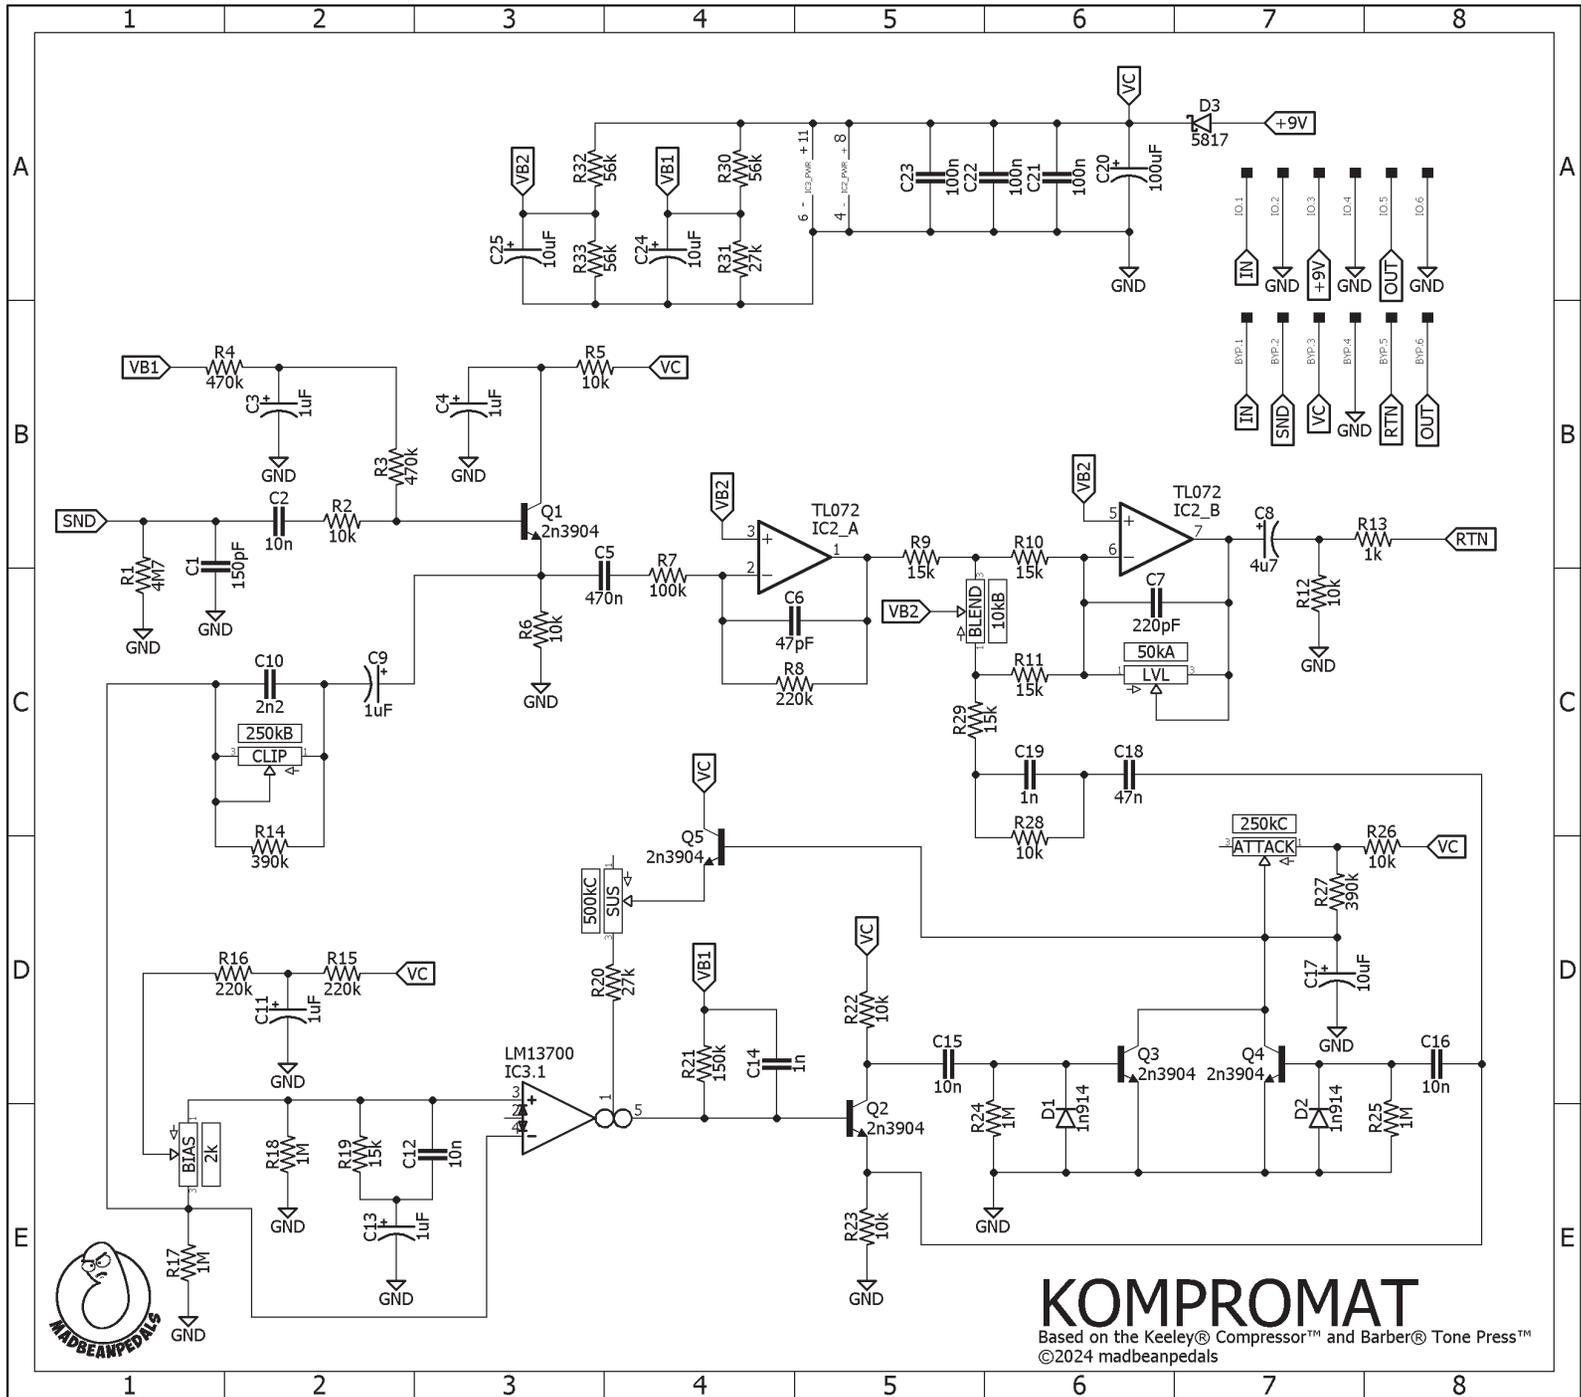

NOTE: Different 1/4" and DC jack styles may require different sized drill holes.
